

# Introduction to GIS For Civil Engineering

November 2, 1pm-4pm  
406 Cooper  
[bit.ly/gisclemson](http://bit.ly/gisclemson)

# Agenda

- Introduction to GIS (1:00 – 1:30 pm)
- Managing your GIS Data: ArcCatalog (1:30 – 1:45 pm)
- Site Suitability Analysis: ArcMap (1:45 – 3:30 pm)
- Future steps: Creating your own data. Spatial and Statistical Analysis. (3:30 – 3:45 pm)
- Resources (3:45 – 4 pm)

# Clemson Center for Geospatial Technologies

**MISSION:** Support all faculty, students, and staff in their GIS-related activities.

## SERVICES

- Consultations
  - Data gathering
  - Advanced spatial analysis
  - Effective cartographic display
- Instruction
  - Class lectures
  - Customized workshops
- Troubleshooting & licensing
- GIS facility for project development: **Cooper Library!!**

**CLEMSON** Home Services CyberGIS Software Data About Resources  
CENTER FOR GEOSPATIAL TECHNOLOGIES

## GIS SERVICES

Instruction - Research support - Data  
Cyberinfrastructure

### GETTING STARTED

Are you new to GIS and don't know where to start? We have created a resource guide that details the resources available to you at Clemson as well as a learning path to master the fundamentals of GIS.

More info

### WORKSHOPS

Our workshops provide hands-on instructions on geospatial technologies. From introduction to GIS to advanced spatial analysis, our hands-on workshops are tailored to fit your needs. Training for specific disciplines is also available on-demand.

More info

### RESOURCES

Our GIS professionals assist Clemson researchers with their geospatial needs. Whether it is finding data, spatial analysis, grant proposals, or intensive computing in our Palmetto cluster, we have the resources to help you with your geospatial needs.

More info

Schedule a consultation!

We provide effective guidance to enable researchers to master geospatial technologies.

Our consultants can help you with any part of your project. From software installation to data research, project management and web mapping, we can help guide your research from beginning to end.

Check out some of the projects we have supported.

Learn more

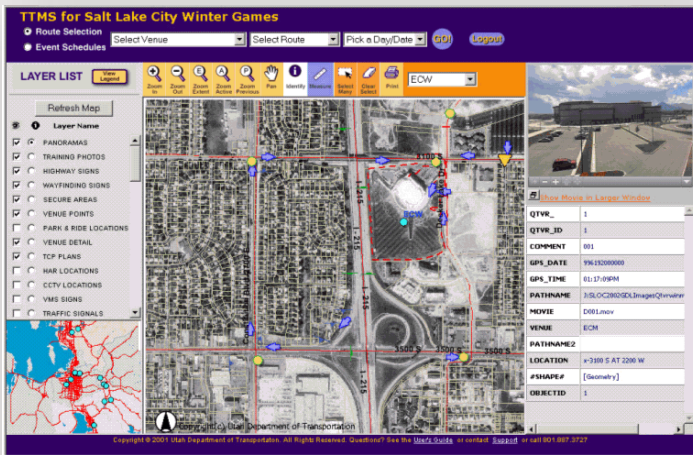

### UPCOMING WORKSHOPS

**Introduction to GIS for Civil Engineering**  
November 2 1pm-4pm, 406 Cooper Library

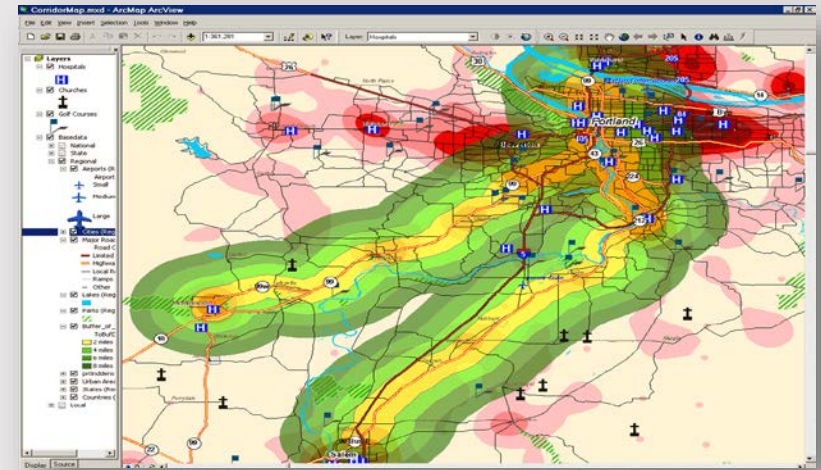

**Introduction to GIS for Archaeology**  
November 6 1pm-4pm, 406 Cooper Library  
*Sign up to reserve your spot!*

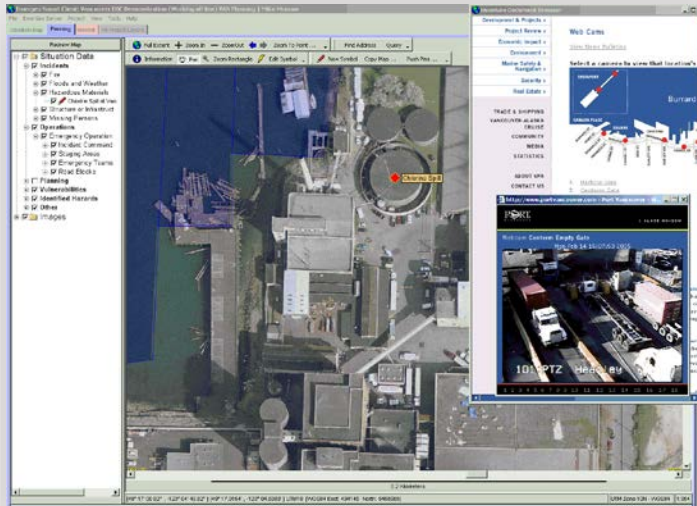

# Geographic Information Systems for Civil Engineering

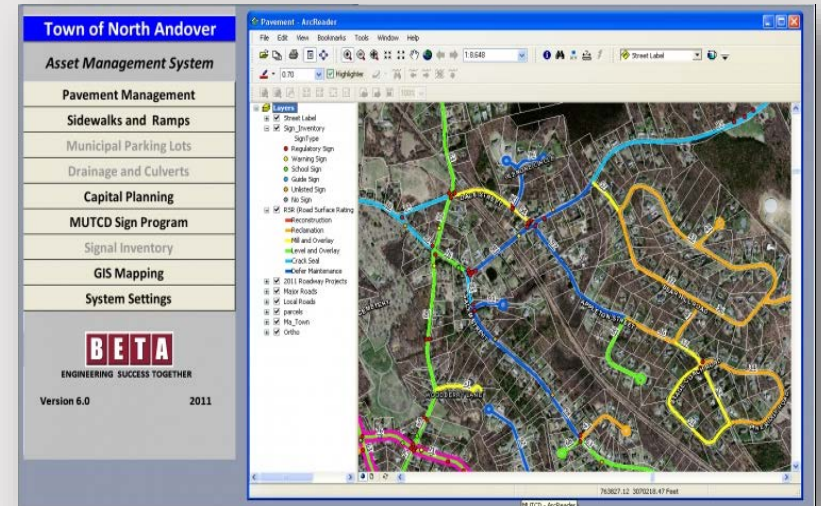

Infrastructure Management

Site Analysis

Critical Infrastructure Protection

CAD Integration

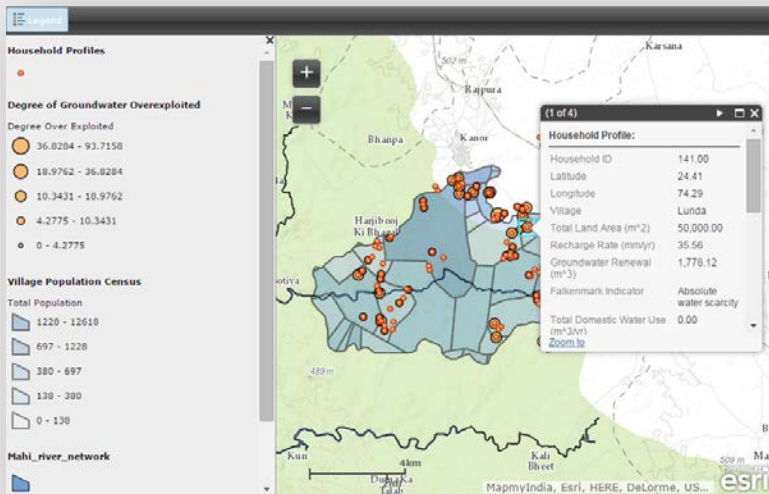

# Applications of GIS in Civil Engineering

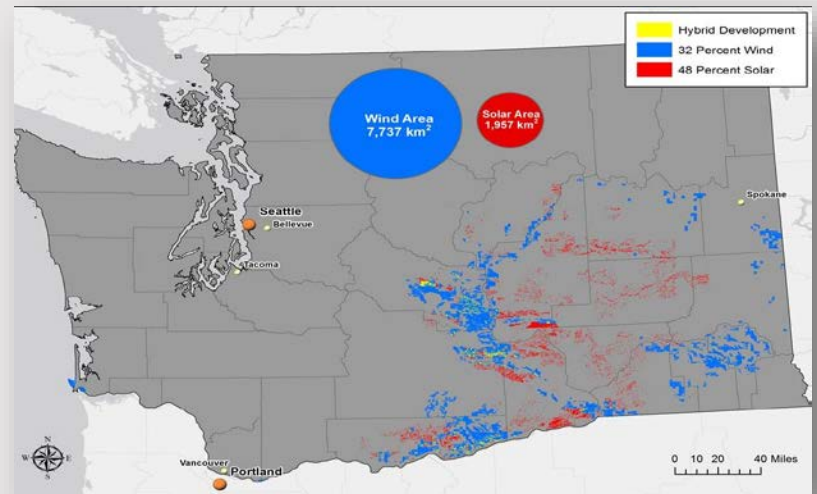

Transportation

Land Development

Water Resources

Energy

# What is GIS?

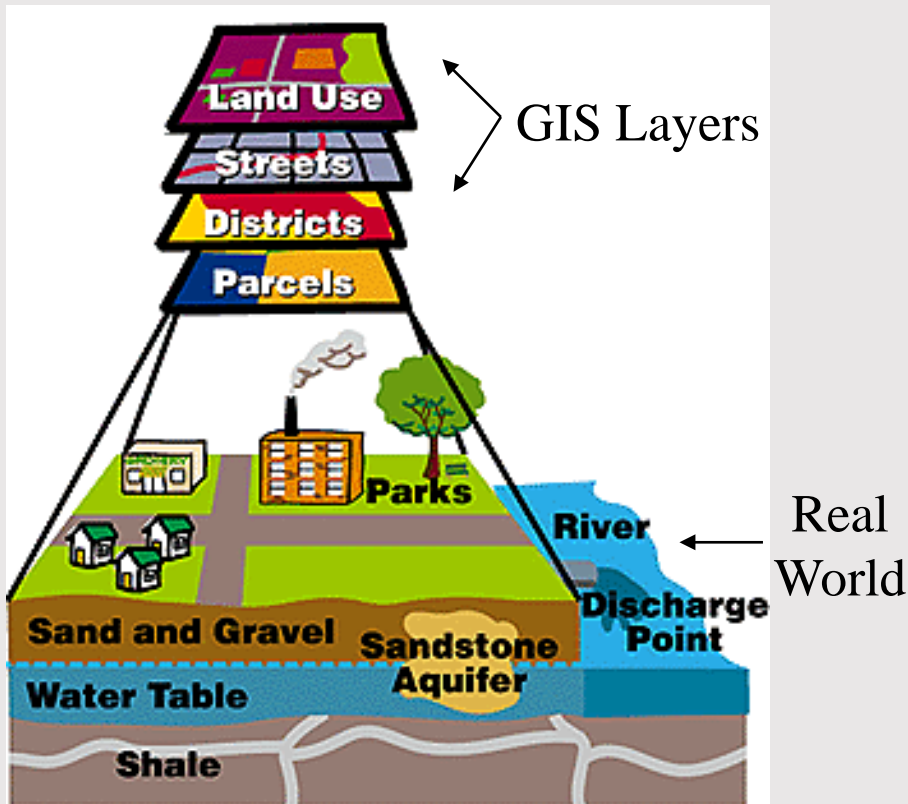

A geographic information system (**GIS**) is a computer-based tool that **links geographic information** (where things are) with **descriptive information** (what things are).

# What is GIS?

A GIS is: "A *system for capturing, storing, checking, integrating, manipulating, analyzing and displaying data which are **spatially referenced to the Earth*** (Chorley, 1987)."

# How GIS Works

A GIS stores information about the world as a collection of **thematic layers** that can be linked together by geography

There are 2 basic spatial data types representing the real world:

## Raster

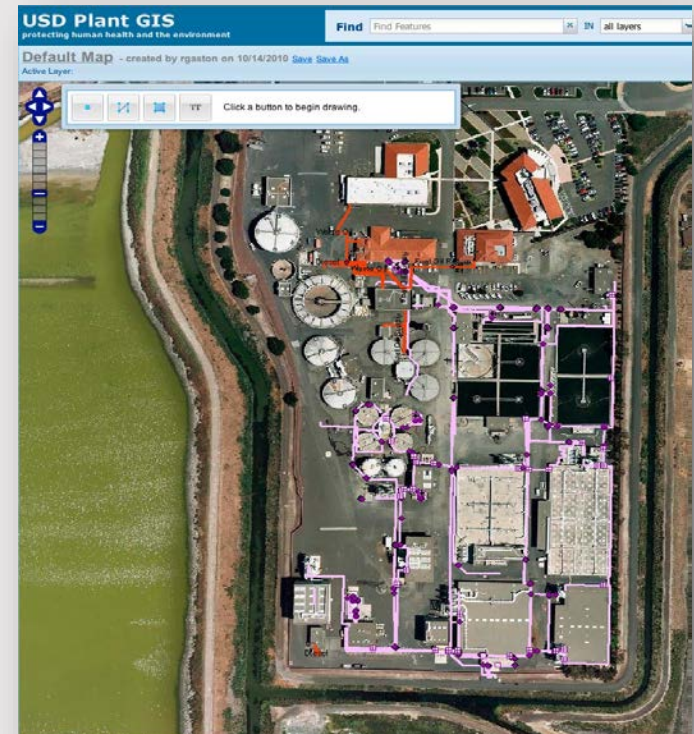

## Vector

The raster view of the world	Happy Valley spatial entities	The vector view of the world
	 x x Points: hotels	
	 Lines: ski lifts	
	 Areas: forest	
	 Network: roads	
	 Surface: elevation	

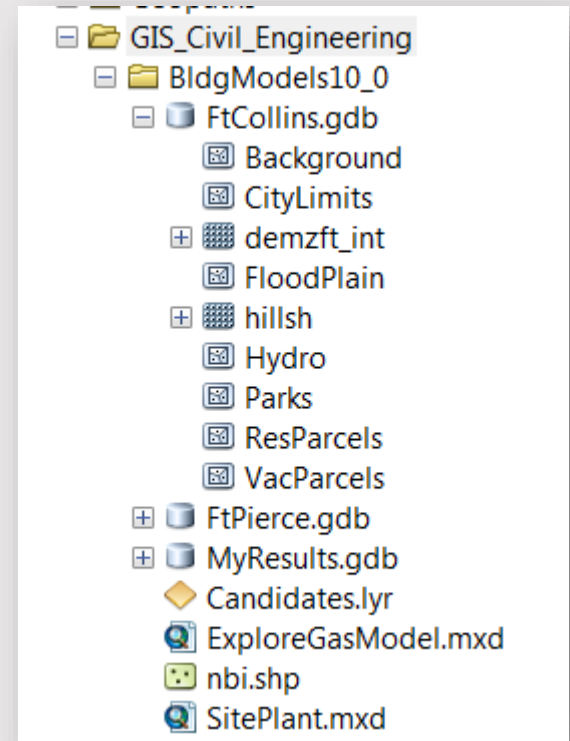

# Site Analysis: Best sites for wastewater treatment plant

- Criteria:
  - Must be within 3,000 feet of the river
  - Must be within 1 mile of the city limits
  - Must be at least 300 feet from residential parcels and parks
  - Must lie outside the flood plain
  - Must be on vacant parcels that are 50,000 square feet or greater

# Learning ArcGIS (Part I): ArcCatalog

- Explore GIS data through Windows Explorer
  - Go to Start -- Computer
  - Navigate to your Workshop Data folder
- Explore GIS data through ArcCatalog
  - ArcCatalog works just like Windows Explorer
  - Ideal for:
    - Copying, pasting, deleting and renaming data
    - Previewing data
  - Always try to work on the left tree

# Vector and Raster Data Models

## Individual files

(up to 2GB)

 Shapefile (polygon, line, point)

 Raster

 Tables

 Map Document

## File Geodatabase

(no limit)

 Feature Dataset

 Feature Class (polygon, line, point)

 Relationships

 Topology

 Tables

 Raster

# Shapefile Vs. Geodatabase

Shapefile	Geodatabase
Attribute table < 2GB	No limit
Geometry < 2GB	No limit
Max number of fields: 255	No limit
Field names < 10 characters	Field names > 10 characters
No update on area, perimeter	Automatic updates
No x,y tolerance	x,y tolerance
3-5 times bigger	3-5 times less space
Spatial Index inefficient	Faster query performance
No date and time in a field, no null values, no raster values	Date and time, null values, raster values

## When to use Shapefiles?

- Exporting to other software
- Emailing, sharing
- Simple geometry files

# Learning ArcGIS (Part II): ArcMap

- **ArcCatalog** previews, storages and manages data
- **ArcMap** works with the data (canvas), manipulates, creates, and analyzes geographic data

# Querying Tables

- Queries are the most common operations in a spatial database
  - used to **find features** that meet certain criteria
  - used to explore **patterns** or **spatial relationships**
  - used to **isolate features** for future analysis (subset or filter data)
  - can be performed based on geometry (**spatial**) or attributes (**tabular**)
- Structured Query Language (**SQL**)
  - standard language for retrieving and updating information in a database
- Most common operation is the **SELECT**
  - `SELECT * FROM "Table" WHERE "Field = Value"`
  - returns a subset of records, e.g. restricts records based on some condition
- Can be simple or complex
  - simple: `"area" > 20`
  - complex: `("area" > 20) AND ("area" < 50)`

# SQL

- **Set Algebra**

- basis for simple query expressions
  - = (equal)

# SQL

- **Set Algebra**

- basis for simple query expressions
  - = (equal)
  - > (greater than)
  - < (less than)
  - <> (not equal to)
- can be used on both strings and numbers

- **Boolean Algebra**

- basis for complex query expressions
  - **NOT**: accepts value of one input and outputs opposite value

STATE NOT South Carolina

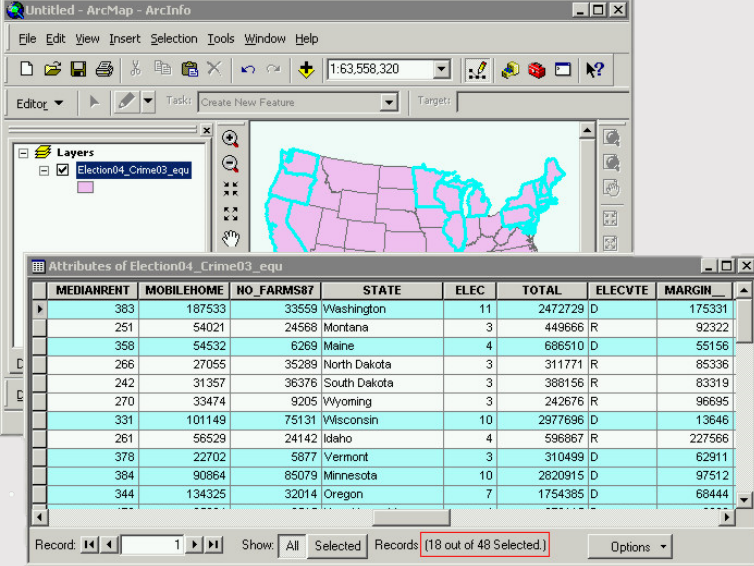

# SQL

## • Set Algebra

- basis for simple query expressions
  - = (equal)
  - > (greater than)
  - < (less than)
  - <> (not equal to)
- can be used on both strings and numbers

## • Boolean Algebra

- basis for complex query expressions
  - **NOT**: accepts value of one input and outputs opposite value
  - **AND**: accepts two values as input and outputs the intersection of both

The screenshot shows the ArcMap interface with a map of the United States and a data table. The table is titled 'Attributes of Election04\_Crime03\_equ' and contains the following data:

MEDIANRENT	MOBILEHOME	NO_FARMS87	STATE	ELEC	TOTAL	ELECVTE	MARGIN_
383	187533	33559	Washington	11	2472729	D	175331
251	54021	24568	Montana	3	449666	R	92322
358	54532	6269	Maine	4	686510	D	55156
266	27055	35289	North Dakota	3	311771	R	85336
242	31357	36376	South Dakota	3	388156	R	83319
270	33474	9205	Wyoming	3	242676	R	96695
331	101149	75131	Wisconsin	10	2977696	D	13646
261	56529	24142	Idaho	4	596867	R	227566
378	22702	5877	Vermont	3	310499	D	62911
384	90864	85079	Minnesota	10	2620915	D	97512
344	134325	32014	Oregon	7	1754385	D	68444

MARGIN > 100000 AND  
MARGIN < 150000

## • Set Algebra

- basis for simple query expressions
  - = (equal)
  - > (greater than)
  - < (less than)
  - <> (not equal to)
- can be used on both strings and numbers

## • Boolean Algebra

- basis for complex query expressions
  - **NOT**: accepts value of one input and outputs opposite value
  - **AND**: accepts two values as input and outputs the intersection of both
  - **OR**: accepts two values as input and outputs the sum of both
- parentheses may be required and the order of precedence is important

The screenshot shows the ArcMap interface with a map of the United States and a data table window titled 'Attributes of Election04\_Crime03\_equ'. The table contains the following data:

MEDIANRENT	MOBILEHOME	NO_FARMS87	STATE	ELEC	TOTAL	ELECVTE	MARGIN_
383	187533	33559	Washington	11	2472729	D	175331
251	54021	24568	Montana	3	449666	R	92322
358	54532	6269	Maine	4	686510	D	55156
266	27055	35289	North Dakota	3	311771	R	85336
242	31357	36376	South Dakota	3	388156	R	83319
270	33474	9205	Wyoming	3	242676	R	96695
331	101149	75131	Wisconsin	10	2977696	D	13646
261	56529	24142	Idaho	4	596867	R	227566
378	22702	5877	Vermont	3	310499	D	62911
384	90864	85079	Minnesota	10	2620915	D	97512
344	134325	32014	Oregon	7	1754385	D	68444

The status bar at the bottom of the table window indicates 'Records: 118 out of 48 Selected.' with a red box around the number 118.

MARGIN < 50000 OR  
MARGIN > 250000

# Boolean Algebra

# Simple Queries

ID	Area	Landuse	Municipality
1	10.5	Urban	City
2	330.3	Farm	County
3	2.4	Suburban	Township
4	96.0	Suburban	County
5	22.1	Urban	City
6	30.2	Farm	Township
7	4.4	Urban	County

- Find all records with **Area** greater than 20.0      ←..... Area > 20.0
- Find all **Urban Landuse**      ←..... Landuse = Urban
- Find all records with **Area** less than or equal to 55.0      ←..... Area <= 55.0
- Find all **Non-Urban Landuse**      ←..... Landuse <> Urban

# Compound Queries

**Find all the municipalities that are not urban cities**

**NOT [(Landuse = Urban) AND (Municipality = City)]**

- Landuse = Urban ←..... Set1
- Municipality = City ←..... Set2
- Set1 **AND** Set2 ←..... Set3
- **NOT** (Set3)

ID	Area	Landuse	Municipality
1	10.5	Urban	City
2	330.3	Farm	County
3	2.4	Suburban	Township
4	96.0	Suburban	County
5	22.1	Urban	City
6	30.2	Farm	Township
7	4.4	Urban	County

**results**

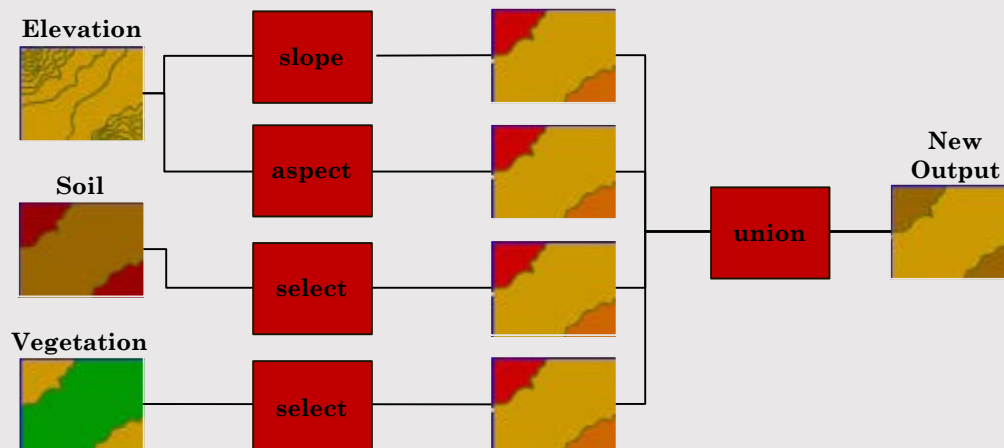

# Spatial (geo)processing

## Application of GIS operations to spatial and related attribute data

- incorporates basic components of spatial data analysis and modeling
- operations use one or more datasets to create one or more outputs
- often connect several operations sequentially to solve a problem

## Framework referred to as **geoprocessing**

- can be executed individually or combined into complex models
- the challenge is choosing the **operation** and the **order** by which to apply them

# Proximity Analysis in Vector: Buffer

A region that is less than or equal to a set distance from one or more features

- can buffer points, lines, polygons
  - fixed distance: 500 m around a market
  - variable distance: 250 m for small roads, 500 m for major highways
  - nested (multi-ring): 500 m, 750 m, 1000 m around an endocrinologist

**Fixed**

**Variable Distance**

**Nested (Multi-ring)**

# Intersect

Output includes only the geometry that is spatially coincident or **common** (intersect) in all inputs

- area occupied by both input features
- there is merging of both **geography** and the **attributes** of all layers
- input layers may be **point, line, or polygon**; **output lowest dimension**

Considered a spatial counterpart to the boolean operator **AND**

# Union

Output features include **all** those that are in either of **both** inputs

- area occupied by all inputs
- there is merging of **geography** and the **attributes** of all layers
- input layers only **polygons**

Considered a spatial counterpart to the boolean operator **OR**

Use features of one dataset to “**cut out**” features from another

- “cookie cutter” overlay, retains area of overlap
- there is a change in **geography** and **only the input attributes remain**
- input layer can be **point, line, or polygon**; **clip layer must be polygon**

Commonly used to cut out data for a specific study area

- for example, clip various continental data layers to map smaller regions

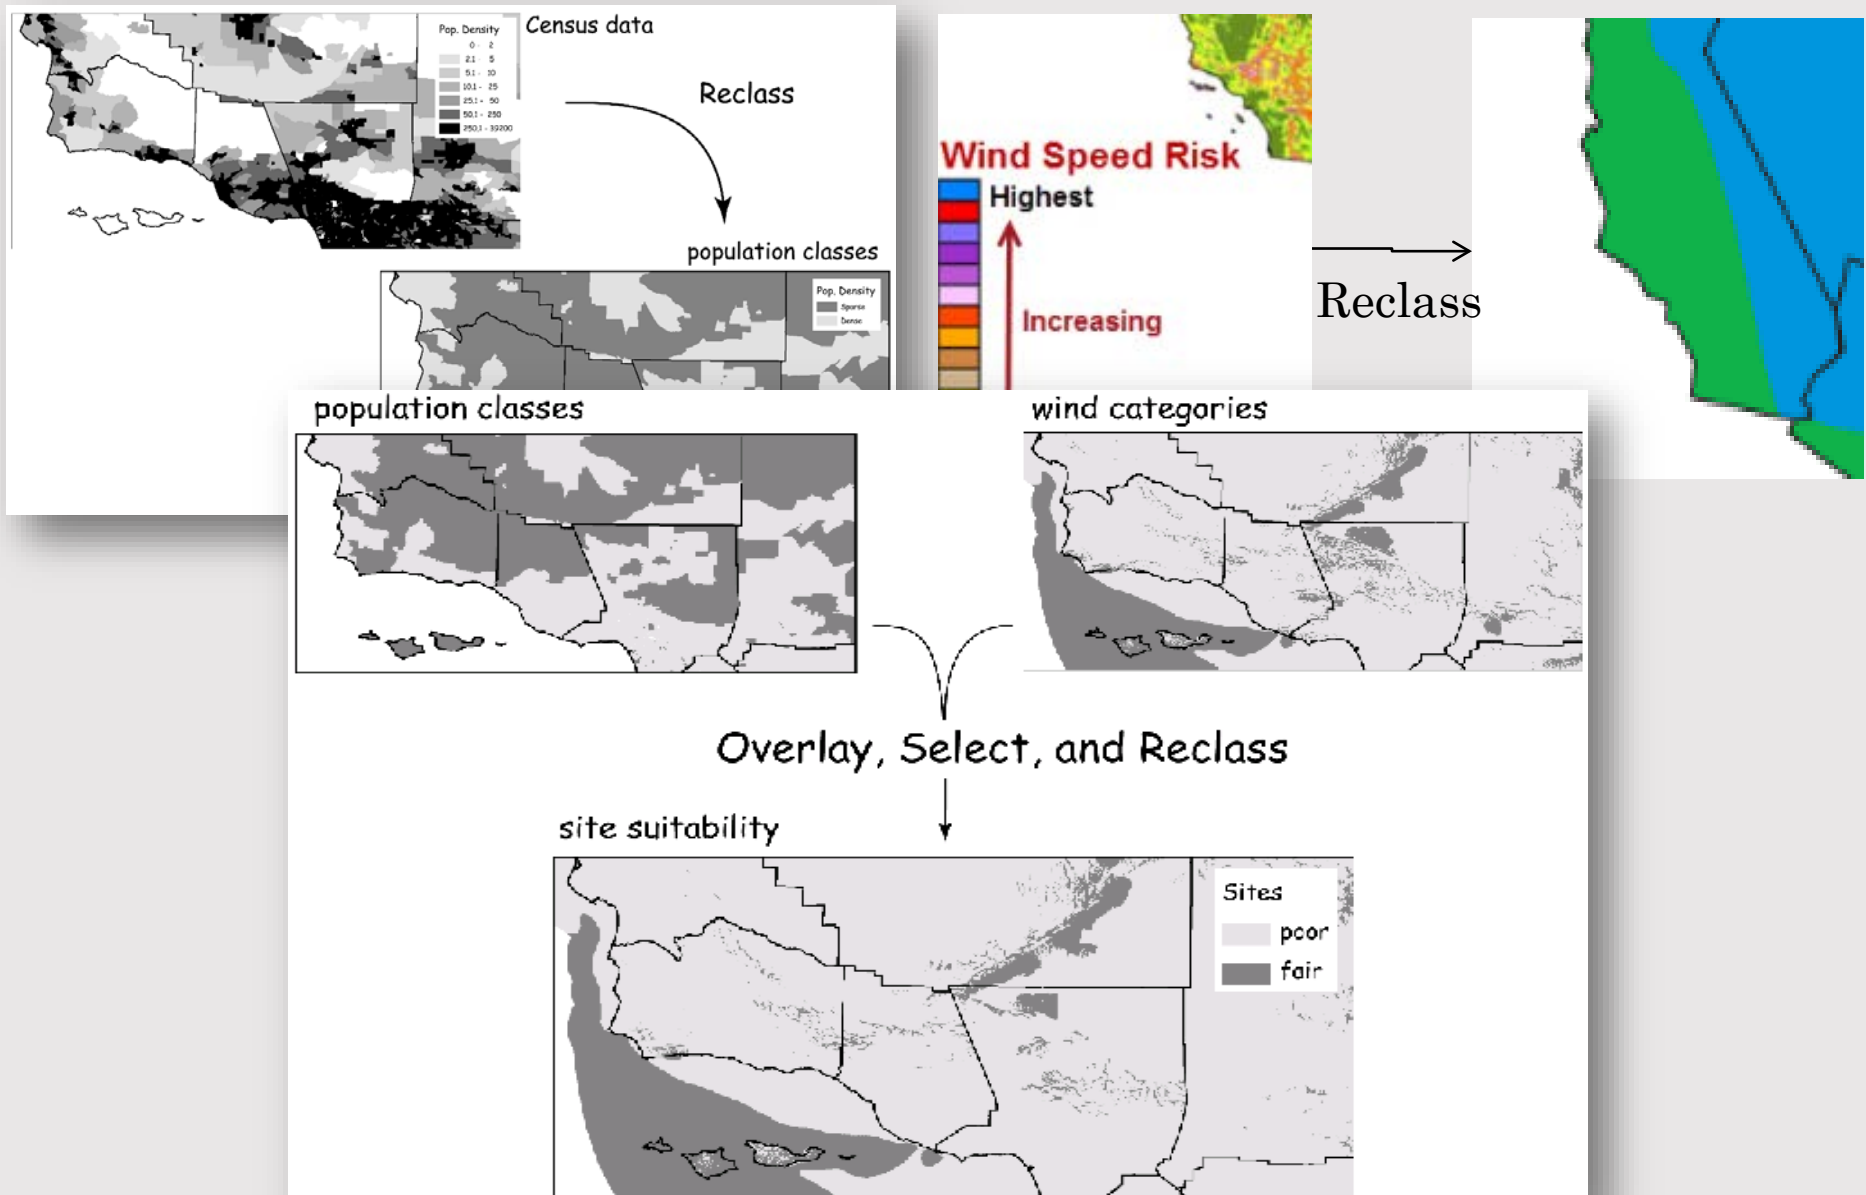

**Input (points)**  
**Clip (circle)**

FID	Atr
1	W
2	Y

# Example: Suitable areas for wind farms

# Research Questions

-How do various factors affect the suitability of Syrian refugee camps in Turkey?

-How can we use this analysis to inform the Turkish government as to which camps should receive more funding, resources, and attention?

-Where is the most suitable location for new refugee camps?

-Chosen factors used for analysis of the suitability of the 16 existing camps in Turkey:

- 1) elevation
- 2) precipitation
- 3) slope
- 4) distance to roads
- 5) distance to cities
- 6) distance to rivers

Analysis of Syrian Refugee Camps in Turkey

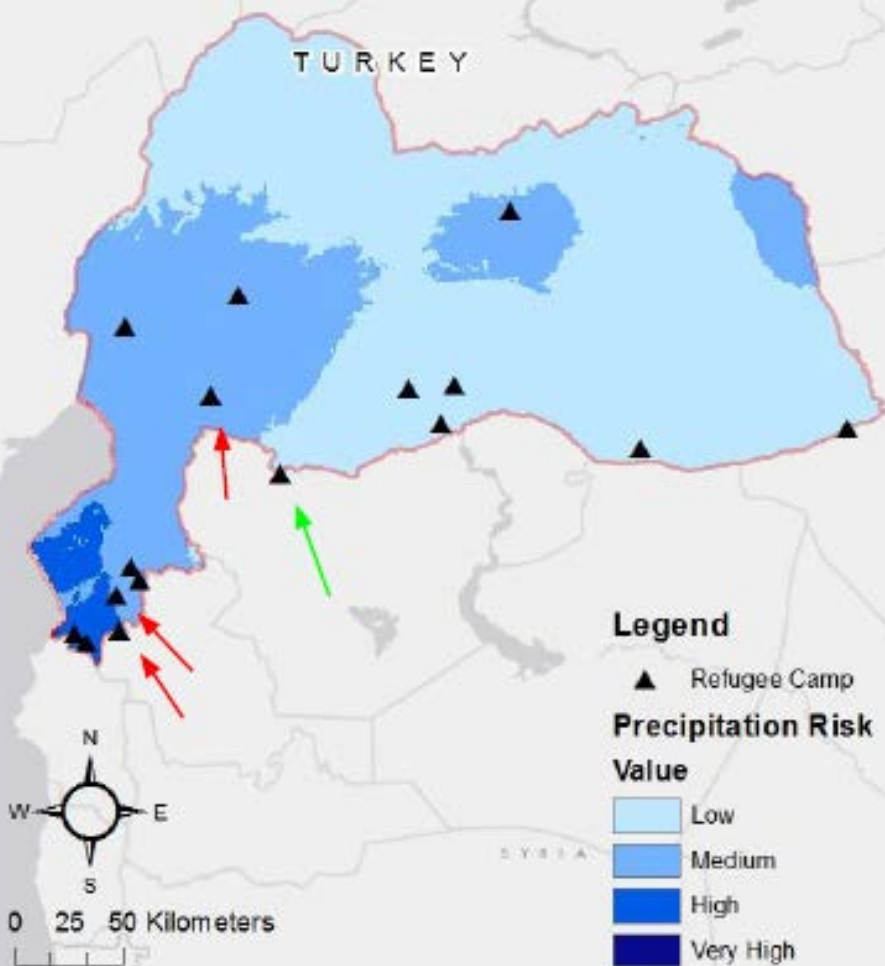

# Ranking Criteria

FACTOR	CLASSIFICATION	RANKING
1) Roads	0 km - 2km	1
	2 km - 5 km	3
	5 km - 10 km	10
2) Cities	0 km - 5 km	5
	>5km	0
3) Rivers	0 km - 5 km	5
	>5km	0
4) Precipitation (Nov-Feb) (mm*10)	0 - 285	1
	285 - 375	5
	375 - 539	7
	539 - 931	10
5) Elevation	0 m - 500 m	1
	500 m - 1000 m	2
	1000 m - 2000 m	8
	2000 m - 2500 m	8
	2500 m - 3000 m	10
	3000 m - 3083 m	15
6) Slope ( <u>percent rise</u> )	0 % - 5 %	3
	5% - 10%	0
	10% - 20%	7
	20% - 40%	10
	40% - 314.22%	15

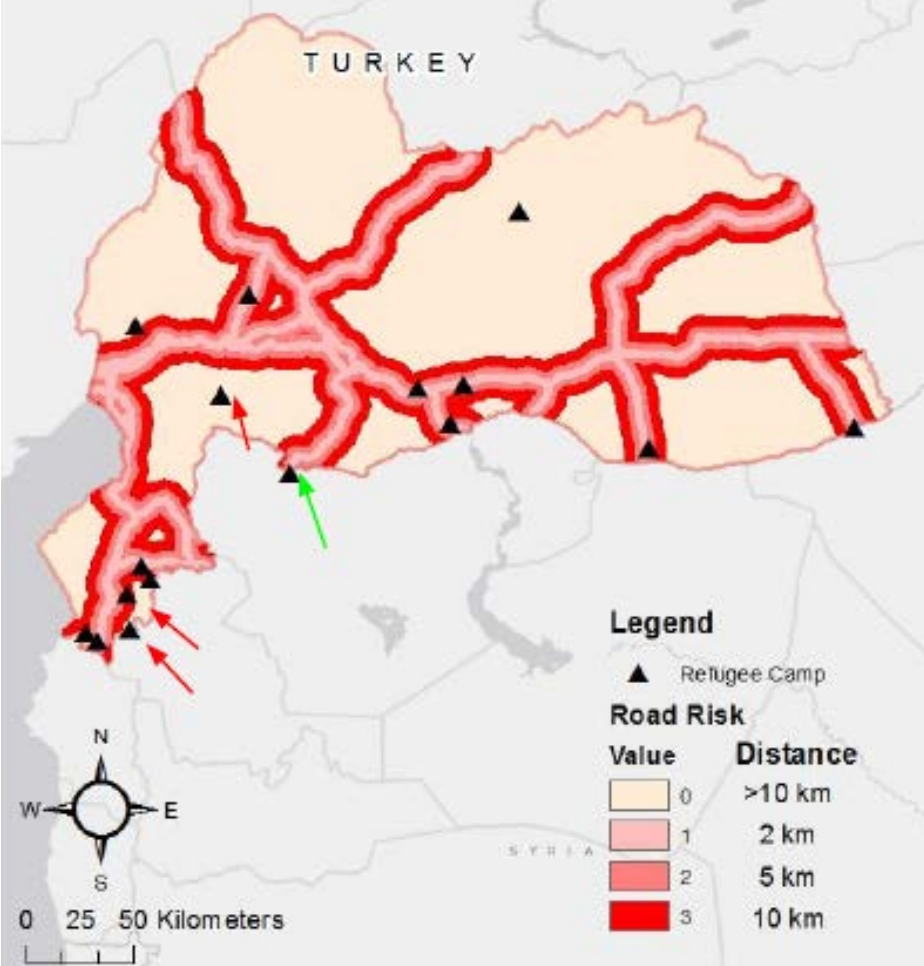

## Aggregate Winter Precipitation

TURKEY

## Proximity of Camps to Roads
